EVOILA | NORTH AMERICA

Sell the value before the price

How VCF assessments help you close and grow Broadcom deals

PREPARED FOR

Carahsoft commercial sales

November 10, 2026

Mark Maisano VP Alliances & Strategy

Tom MacKay VP of Technical Sales and Services

Andrew Hald Lead Solution Architect

WHY WE ARE HERE

We help you close more VCF deals, faster, and grow every one of them.

Ten minutes: who we are, why it pays you, and when to bring us in.

evoila

Who we are

A specialty services firm that brings focus and clarity to the platform transition

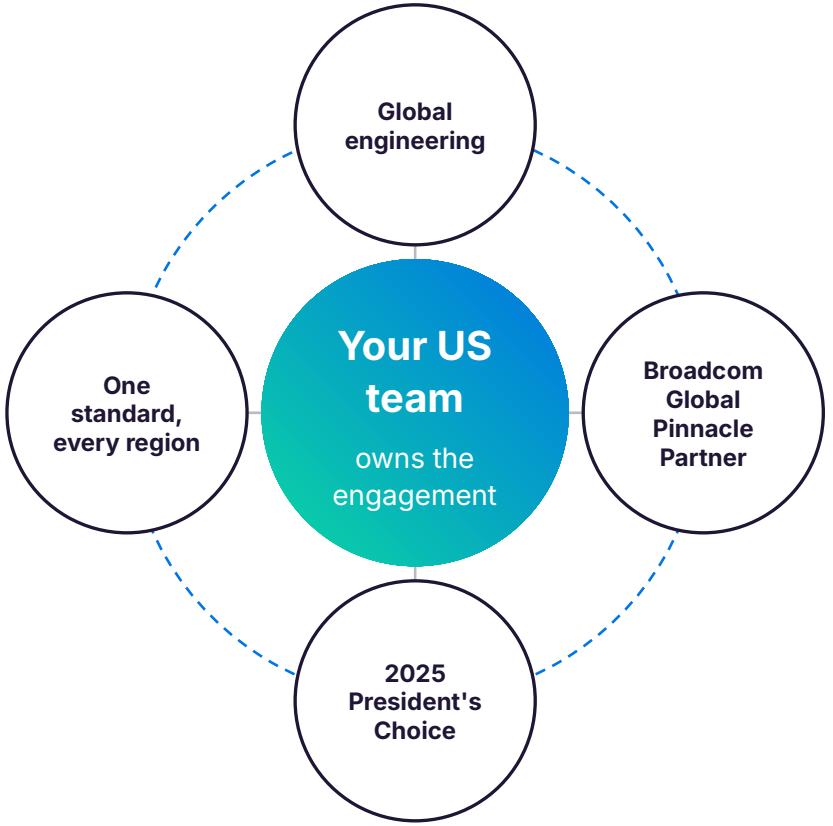

Part of the global evoila group. Our North America team leads every engagement here.

FOR YOU Engineers in several countries, so we can deliver in your accounts wherever your customers operate.

We listen first. We learn your environment and your goals before we propose anything, and we work in a small number of specialized areas.

An accountable US team. The people you work with are here, backed by evoila engineers in other countries.

Services are the business. We also resell product when it is part of the right solution.

Across evoila, **[1,000+]** VCF implementations and **[500,000]** engineering hours. Our US architects have delivered VCF implementations for Broadcom and for partners, and trained partner teams to deliver them.

What is in it for you

01

Close faster

A plan the customer trusts moves the deal past the price conversation.

02

Sell bigger

The assessment shows the whole estate: hardware refresh, add-on software and services.

03

Defend the price

An architect ties the license to value and return in the customer's own environment.

WHY BROADCOM CARES

Anyone can sell the license. Broadcom wants partners who get it adopted, used and renewed.

Distribution is now asked to drive adoption and consumption, not only license sales.

evoila

Customers see the price before they see the value

PRICE FIRST

THE FIRST CONVERSATION

- The renewal quote and the sticker shock

HOW THE CUSTOMER REACTS

- Looks for a way off VMware

WHAT HAPPENS TO THE DEAL

- Stalls, shrinks or walks

AFTER THE SALE

- Licenses sit on the shelf

VALUE FIRST, WITH AN ASSESSMENT

THE FIRST CONVERSATION

- **Their environment, their goals and their options**

HOW THE CUSTOMER REACTS

- **Sees what VCF does for them and what it saves**

WHAT HAPPENS TO THE DEAL

- **Moves forward with a plan and a business case**

AFTER THE SALE

- **A phased path to adoption and the next deal**

Three accounts to bring us into

01

Struggling to renew

Pushing back on price or looking at alternatives. We show the value and the return first.

02

Bought VCF, not using it

Licenses sold but not deployed. We build the plan that turns entitlement into adoption.

03

Decided not to renew

Worth a second look. A real business case reopens the conversation.

Why our assessment lands with customers

01
A senior architect leads it

- Run by VCF architects
- Consulted, not surveyed
- Credibility in the room with you

02
Built on their environment

- Their data, workloads and goals
- Findings ranked by risk
- Specific, not generic

03
Ends in a plan they can buy

- Path to the target platform
- Savings and return they can defend
- A phased statement of work

What comes out of it, and what it means for you

01
Your customer gets

- An adoption plan from today to the target
- Cost savings and a return they can show finance
- Risks and gaps, ranked
- A phased statement of work

02
You get

- A deal backed by a business case
- Line of sight to hardware refresh and more
- Pull in your resellers and solution partners
- A customer who renews and expands

From assessment to commission

01 **Introduce**	02 **Assess**	03 **Plan**	04 **Close**	05 **Grow**
You bring us into an account that is stuck or not adopting.	Our architect reads the environment and meets the customer's team.	Roadmap, business case and a phased statement of work.	License and services sold together, with the value proven.	Adoption, renewal and the next deal in the same account.

evoila

Lead with what the customer is worried about

01

VCF readiness

The broad starting point: where they are and the path to VCF 9.

02

Security

Posture, exposure and the protection they already own.

03

Private AI

Use cases, platform fit and readiness to run AI on premises.

04

Storage

Capacity, resilience and what to modernize first.

05

Modern applications

Kubernetes on VKS: readiness and a modernization plan.

Bring us into one deal this month

1. **Pick one account stuck on price or not using VCF**
2. **Call Mark, Tom or Andrew, or loop us into the email**
3. **We join your next customer call and scope the assessment**
